## SAFARI

After five years in the making, Safari is finally here! The crew faced extreme challenges while the cameras were rolling. After withstanding a hurricane, escaping a forest fire, and being lost for days in a blinding snow

storm, the unique award-winning Safari brings you face to face with the most endearing and playful - as well as the most unexpected and deadly - creatures on earth!

Naturalist John Ross hosts Safari. During the making, he was watching a leopard killing a deer just in front of him and being very close when a lioness in hiding, exploded out and grabbed an antelope!

The purpose of Safari is also to answer the question; How do we protect animals from extinction? The answer lies in gaining more understanding of the animals. Don't miss out as Safari provides an absolutely compelling portrait of animals in the wild!
